Subject: Sterility Statement

To whom it may concern,

This letter is to declare that Microdacyn60® is a sterile CE approved product.

Microdacyn60® has not been sterilized by secondary means (i.e. Gamma sterilization) because the solution itself is sterile because of its endogenous antimicrobial active ingredient Hypochlorous acid (HOCl).

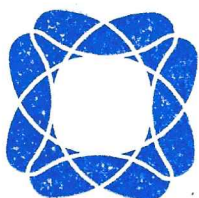

Sterilization validation has also demonstrated that sterility is guaranteed during manufacturing.

Microdacyn60® stability and efficacy properties are guaranteed until –at least- 60 days after opening and 24 months after manufacturing. Consequently Microdacyn60® is suitable for repeated use on multiple patients during this period.

Sincerely,

B.H.J.H. de Brouwer
